Introduction

Linux commands are used to communicate with the operating system through the terminal. They help us perform different tasks such as checking files, system information, users, memory, and running processes.

In this experiment, we used basic Linux commands like `ls`, `pwd`, `date`, `whoami`, `hostname`, `uname`, `id`, `df`, `free`, and `ps`. Each command performs a different task and helps us understand the Linux environment.

These commands are useful for managing and checking the system using the terminal.

Result

The basic Linux commands were executed successfully, and their functions were understood.
