```

WSL means Windows Subsystem for Linux. It allows us to use Linux on a Windows computer.

First, we open PowerShell as Administrator and install WSL. After that, we restart the computer. Then Ubuntu is opened and we complete the setup by creating a username and password.

Next, we update Ubuntu and install GCC. GCC is used to compile C programs. We check whether GCC is installed correctly.

After that, we create a C program using the Nano editor. Finally, we compile the program using GCC and check whether it works correctly.

Result

WSL and Ubuntu were successfully installed. GCC was also installed successfully, and we were able to create and compile a C program.
